

LMHI 2025 WORLD CONGRESS

BIOGRAPHY

LEX RUTTEN, MD

Independent researcher

Retired as homeopathic practitioner after 40 years of practice. Extra training in research methodology and statistics. Prognostic factor research since 1997.

Introduced the following scientific procedures into homeopathy: Bayes' theorem; Modified Naranjo algorithm (MONARCH) to assess causality; prognostic factor research (PFR); probability calculations for homeopathic symptoms; repertorisation app for viral infections and COVID-19.

Organised a worldwide data collection of over three thousand COVID-19 treatments; 1424 were selected to constitute a Bayesian treatment algorithm.

Is working on a Bayesian repertory of best cases, at present containing 800 cases.

Produced over a hundred scientific papers in international journals. These papers were cited about 1300 times. Produced two books about statistics and research methodology in homeopathy.
